

ES3035+ Digital Insulation Resistance Meter

I . Characteristic

ES3035+ digital insulation resistance tester, also known as megohmmeter, high-voltage insulation resistance meter, is used for insulation resistance testing. The instrument has large-screen LCD gray and white backlight display, data storage, data access, alarm, automatic discharge, charging, automatic shutdown and other functions. At the same time, it also has the function of measuring the absorption ratio of DC voltage and AC voltage and polarization index. The whole machine is beautiful and high-grade, with a wide range, high resolution, convenient operation, convenient carrying, accurate, reliable, stable performance, large output power, and strong anti-interference ability.

ES3035+ has a shock-proof, dust-proof, moisture-proof structure, and is suitable for harsh working environments. It is a common and indispensable instrument for telecommunications, electricity, meteorology, computer rooms, oil fields, electromechanical installation and maintenance, and industrial enterprises that use electricity as industrial power or energy. It is suitable for measuring the insulation resistance value of various insulating materials and transformers, motors, cables and electrical equipment.

ES3035+ digital insulation resistance meter consists of medium and large scale integrated circuits. This watch has large output power and many output voltage levels (there are 6 voltage levels). The rated insulation test voltage range is 250V~5kV, and the insulation resistance measurement range is 0.01MΩ~2000GΩ. The DC voltage measurement range is 0~1000V, and the AC voltage measurement range is 0~750V.
